

BookSwap Connect

Charlie Albert Lasuin & Dr. Jaratin Lily
Faculty of Business, Economics and Accountancy
Universiti Malaysia Sabah

Introduction

Buying textbooks for college students who are on a tight budget. There are not many books available in university libraries, which makes the problem even worse. Textbooks are very expensive, which makes it hard for college students to pay for everything they need. Because university libraries do not have many resources, this problem gets worse, making it harder for students to get the course materials they need. The swapping of textbooks between seniors and juniors needs to be made easier and cheaper. It would allow students to find seniors who are ready to sell their textbooks for less money, creating a long-term and cost-effective solution for everyone.

Objective: The primary objective of the BookSwap Connect app is to establish a platform that enables students to buy and sell textbooks within the university community.

Key Features of the App

User Profiles

Allow students to create profiles indicating whether they are looking to sell or buy textbooks.

In-App Listings

Enable users to list the textbooks they have available for sale, including details such as the book's condition, edition, and price.

Transaction History

Maintain a transaction history for each user, ensuring transparency and accountability in the buying and selling process.

Search and Filters

Implement a robust search and filtering system to help students find specific textbooks based on course, author, or title.

Secure Messaging System

Provide a secure in-app messaging system to facilitate communication between buyers and sellers for negotiation and coordination.

Rating and Reviews

Integrate a rating and review system to build trust within the community, allowing users to provide feedback on successful transactions.

Notification System

Implement a notification system to alert users about new listings, messages, and upcoming textbook exchange events.

Text Book Exchange Events

Organize periodic events or fairs where students can physically exchange textbooks, fostering a sense of community and direct interaction.

Conclusion

University students often have trouble affording textbooks, but BookSwap Connect offers a creative way to solve this problem. The app uses technology to connect students within the university community. This app helps keep costs down, make the best use of resources, and get people involved in their community. Students must actively participate in BookSwap Connect for it to work. In conclusion, the app creates a collaborative space where everyone benefits from sharing resources and lower costs.
