

## INTRODUCTION

- Biometric based attendance automatically capture the students attendance by using their fingerprint.
- To replace the conventional method.
- To solve the attendance issue - false attendance record, time management, managing attendance automated.

## PRODUCT DESIGN AND PROCESS

**BIO-ATTENDANCE APP**

**1.0 Diagram of proposed system**

## CONCLUSION

- This proposed bio attendance app was designed mainly for the educational organizations such as UMS.
- The proposed system was comprised of the attendance management system and fingerprint identification system.
- The development of this application will not only ease the process of taking class attendance but it also will help to monitor the large database.
